Volume 55, no. 1, p. 24–42, 2017, <https://doi.org/10.1128/JCM.01379-16>.

Page 33: In Table 1, the organism *Eisenbergiella tayi* gen. nov., sp. nov., along with the pertinent information associated with it, was incorrectly listed among the Gram-negative anaerobes because it can sometimes stain Gram negative. It is, in fact, a member of the family *Lachnospiraceae* and should be listed among the Gram-positive anaerobes with the other new species in that family.

Page 36, Table 2: The second entry in the “Revised name” column should read “*Blautia obeum* comb. nov.”
